Evolution of Minimally Invasive Surgery for Treatment of Lumbar Disc Herniations

Traditional Microdiscectomy to Percutaneous Discectomy

Developments in the treatment of herniated nucleus pulposus continue to rapidly emerge. Mastering new approaches and techniques is an integral part of providing patients with the most technologically advanced treatment options. These new techniques use smaller incisions and specifically designed power driven instrumentation along with a needle, dilator, and cannula to access the disc space and remove herniated lumbar disc material. The objective of this interactive webinar is to present and discuss advances in minimally invasive lumbar discectomy techniques including patient selection criteria.

We cordially invite you to attend a Free Webinar

Date: January 23, 2009 Times: 12:00 - 1:00 EST
2:00 - 3:00 EST
4:00 - 5:00 EST

Featuring: Mitchell Hardenbrook, MD
Boston Spine Group - Boston, MA
Assistant Professor, Surgery Uniformed Services Univ. of the Health Sciences - Bethesda, MD

To Register Go To:
