Critical Appraisal of Lumbar Interbody Fusion Techniques, Materials and Biologics on Fusion Outcomes

The TLIF approach to lumbar interbody fusion continues to evolve with advancements in surgical technology, materials and techniques that increasingly allow effective and efficient access and preparation of the disc space for lumbar interbody arthrodesis. Whether performed minimally invasive or open, the TLIF approach presents challenges associated with one-sided access to the intervertebral space. This interactive learning event will present an overview of exciting developments in innovative technologies, techniques, and materials to address these challenges. A critical analysis of each individual innovation as well as their aggregate effects on fusion rates and clinical outcomes will be discussed.

We cordially invite you to attend a Free Webinar

Date: January 9, 2009 Times: 11:00 - 12:00 EST
12:30 - 1:30 EST
2:00 - 3:00 EST

Featuring: **Larry T. Khoo, MD**
Co-Director, Comprehensive Spine Center, UCLA Medical Center, Neurosurgery
Assistant Professor, Neurosurgery and Orthopedics, UCLA Medical Center, Neurosurgery

To Register Go To:

For 11:00-12:00 meeting: <https://www1.gotomeeting.com/register/712025412>

For 12:30-1:30 meeting: <https://www1.gotomeeting.com/register/926409795>
