

HydroCision[®] turns water into a surgical tool

HydroCision SpineJet MicroResector is:

Safe

- Significantly reduces instrument passes in and out of disc space
- Decompresses with minimal nerve root manipulation
- Cannula protects nerve root from inadvertent injury

Fast

- Quickly and efficiently removes nucleus
- Eliminates the need for additional instruments

Effective

- Removes optimal amount of nucleus to decompress nerve root
- Minimal annulotomy reduces the risk of reherniation*
- Reduced nerve root manipulation decreases post operative radicular pain secondary to neurofibrosis**

"The MicroResector reduced my reherniation rate and recurrent radicular pain in my high demand, active patient population."

Mitchell Hardenbrook, M.D.
Director of Spine Surgery, Naval Medical Center, Portsmouth, Virginia

SpineJet Fluidjet Technology

The SpineJet fluidjet technology uses a high-velocity water stream to simultaneously cut and aspirate tissue.
